

The Story of Your Invention

Invention Log

What is an invention?

An invention is something new that enables us to solve a problem or do something better or easier.

The purpose of this Invention Log

All stories have an ending. In this case, the ending of what you are doing is your invention. But all stories also have a beginning and middle. The purpose of this Invention Log is to tell the entire story of your invention. In it, during every step you take in making your invention, you will record what you did, why you did it, and how you did it. This Invention Log is an important part of the invention process and is a complete and accurate record of the ideas, plans, and processes by which the invention was created. Invention Logs can be used by students to prove they came up with the idea and invention. Oftentimes, they are used as part of the patenting process.

How to use this Invention Log

The Invention Log is not a book report that is created after you are done. Rather, it is a diary that is continuously filled in as you work on your invention. Follow the steps of the invention process and fill out the various pages as you work on them. When you are done with a page, print your name and the date at the bottom. If you need extra space for any section, make copies of the Blank Page (Page 17) and use that for any purpose. Once you are done, put the pages in the order in which you did them and staple them to make a complete Invention Log. This log will also be used as part of the final presentation and needs to be filled in using complete sentences (except for things like a list of materials). Teams share one Invention Log and should attach signatures of all inventors.

The name of the invention: Door hanger stopper.

The problem that it solves: This invention stops the door from hitting the wall and at the same time, It has hangers where you can hang your things if you have no other place to put them. Also this invention at the same time you can use that same door stopper and stick it to the wall and have just hangers to hang your coat and things when you need too.

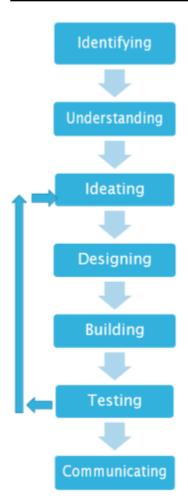

Statement of Originality

I promise that the ideas in this invention Log are my own. (If a team, all should complete.)			
Inventor Name(s):			
Leslie Vega , Me'chelle Davis, Rileigh Warren			
Signature(s):			
Me'Chelle Davis,			
Date: <u>02/19/21</u>			
Grade: 9th			
School: Ypsilanti High School Stem Middle College			
Town: <u>Ypsilanti,Mi</u>			

Invention Process Overview

Identifying a problem means brainstorming and using research to discover problems and who might have these problems. You might uncover these problems at home, at your school, with your sports team, listening to the news, or somewhere else entirely.

Understanding the problem means you know what is causing the problem and exactly what you want to happen when the problem is solved. The better you understand the problem, the better your solution will be.

Ideating means thinking about the problem: brainstorming and researching different ideas and options to solve the problem.

Designing means deciding what your invention solution will be made of, what it will look like, and how it will work.

Building means assembling your invention based on your solution design using the materials and the process you have decided to use.

Testing your solution is how you find what works and what doesn't. You will modify or change your design, build in those changes, and test the changes. Testing also includes an analysis of the pros and cons of the invention, its impact on society and the environment, its marketability, and its social value. You keep repeating this process until your invention or prototype works and works well.

Communicating means explaining the problem and your research, how your invention solution solves the problem, who might use your invention, your process in creating this invention, and how you might make it even better.

Terms to Explore

These are terms that have to do with inventing. Some of these terms are used in this Invention Log, and some may be terms that you will want to use to describe your process. Please read over these terms before you get started.

advertise – the act or practice of calling public attention to one's product, service, need, etc., especially by paid announcements in newspapers and magazines, over radio or television, in social media, on billboards, etc.

brainstorm – to produce an idea or way of solving a problem by holding a spontaneous group discussion or individual thinking session.

data collection – the process of gathering and measuring information of different variables, in a systematic way that helps one to answer research questions, test hypotheses, and evaluate outcomes.

design – to plan and make decisions about something that is being built or created. To create the plans, drawings, etc. that show how something will be made.

durable – able to withstand wear, pressure or damage.

engineer – people who invent, design, analyze, build, and test machines, systems, structures, and materials to fulfill objectives and requirements while considering the limitations imposed by practicality, regulation, safety, and cost.

entrepreneur – a person who organizes and operates a business or businesses, taking on greater than normal financial risks in order to do so.

experiment – a scientific procedure undertaken to make a discovery, test a hypothesis, or demonstrate a fact.

hypothesis – a proposed explanation using previous knowledge, but made on the basis of limited evidence; a starting point for further investigation.

improvements – the act or process of making something better; the quality of being better than before.

interview – a formal discussion to establish needs or requirements; a report or reproduction of information is obtained.

inventor – a person who invented a particular process or device or who invents things as an occupation.

invest – to put (money) to use, by purchase or expenditure, in something offering potential profitable returns.

market – to advertise and offer a product for sale; to present something in a particular way and make people want to buy the product.

marketable – able or fit to be sold or marketed; meets enough market needs to be able to be sold.

original – created directly and personally by a particular artist; not a copy or imitation.

operational – in or ready for use.

patent – a government authority or license conferring a right or title for a set period, especially the sole right to exclude others from making, using, or selling an invention.

perseverance – continued effort to do or achieve something despite difficulties, failure, or opposition.

pitch – promotion by means of an argument and demonstration; a short verbal dialogue that tells the story and benefits of a product.

problem – a matter regarded as unwelcome or harmful and needing to be dealt with and overcome.

product – something that is made or grown to be sold or used.

profit – money that is made in a business, through investing, etc., after all the costs and expenses are paid; a financial gain.

profitable – yielding advantageous returns or results; yielding a financial profit or gain.

prototype – an original or first model of something from which other forms are copied or developed; an early version of a product that helps the inventor consider different options for design before finalizing a go-to-market design.

publication – the act or process of producing or printing a book, magazine, newspaper, etc. and making it available to the public.

research – the study of materials and sources in order to establish facts and reach new conclusions.

seek – to search for something or someone; ask for help to achieve something.

solution – something that is done to deal with a problem; something that solves a problem.

source – the point or place which something starts; a place, person, or thing from which something originates.

substantially – to a great or significant extent.

test – a procedure intended to establish the quality, performance, or reliability of something, especially before it is taken into widespread use.

testimonial – a written or spoken statement in which you say that you used a product or service and liked it.

Requirements and Restrictions

To participate in the STEMIE National Invention Convention and Entrepreneurship Expo (NICEE) in the Spring, there are certain restrictions and requirements.

- Your teacher must sign off on your solution/invention before you begin building your design.
- Remember that animals are not allowed at NICEE, so if your invention is for animals, you must demonstrate it in pictures or on a stuffed toy. Demonstrations/presentations may not include human beings or other living creatures.
- Your display board must be no wider than 24" with the 12" wings folded in.
- You must have a COMPLETED, SIGNED Invention Log with each page signed by you.
- Your prototype/invention should be no more than 2 feet high and 2 feet wide and be able to set on a table top.
- Your invention does not have to be a working model, but you need to be able to explain how it would work. If it can be operational, it should be.
- Wall outlet electricity (120 VAC) may NOT be used at NICEE. Battery powered devices are fine.
- Inventors may not use lighters, matches, candles or any other open flame or heat source nor any material or liquid considered combustible.
- Inventions may not contain biohazards or utilize any materials that are, or could become, dangerous.
- Other restrictions include: electric stun guns, martial arts weapons, guns, replica guns, ammunitions, fireworks, knives of any size, mace, pepper spray, razors, box cutters or balloons.
- If your invention cannot be actually demonstrated at NICEE due to issues with size, electricity, or hazardous materials, a video of the device in action can be shown.

Originality

It is very important that your solution is original and does not already exist or is substantially different from any other invention. These are great places to research to find out if your idea already exists:

- Libraries (ask a librarian for advice on where to look!)
- The internet (e.g., www.google.com, www.bing.com)
- Stores (e.g., www.amazon.com, www.bestbuy.com, www.walmart.com, www.target.com)
- Books about your topic(s) (look up at www.amazon.com)
- Professionals in the industry (check out <u>www.linkedin.com</u> for possible people to interview)
- Trade/industry-specific publications (each industry has topical magazines and websites)
- United States Patent and Trademark Office (visit www.uspto.gov to search for patents and trademarks)
- Domain registrars (e.g., www.GoDaddy.com to see if your product name .com is taken)

The Steps You Will Take

As you work on your invention, follow these steps and check them off as you complete them. Don't write your ideas here - use the appropriate space in the following pages to complete each of the sections.

- 1. What problem are you trying to solve?
- 2. What is the result you are trying to achieve?
- 3. What are some possible solutions and which one did you choose to do?
- 4. Has this solution been done before?
- 5. Make a model (drawing) of the invention.
- 6. What problems might you encounter with this design?
- 7. How will you fix those problems?
- 8. Repeat steps 5 to 7 until you have a design that you think will work.
- 9. What parts and materials will you need to make the invention?
- 10. Where will you get those parts and materials?
- 11. What additional skills will you need to make the invention?
- 12. Who can help you do those activities?
- 13. Get the parts and materials and build the invention. Get any help you need to build it.
- 14. Test and evaluate the invention.
- 15. Identify any problems with the invention.
- 16. Repeat steps 5 to 15 until the invention works as planned.
- 17. Name the invention.
- 18. Plan and create the Invention Display Board.
- 19. Practice what you will say about your invention in the Judging Circle.
- 20. Be proud of what you have done!!!!

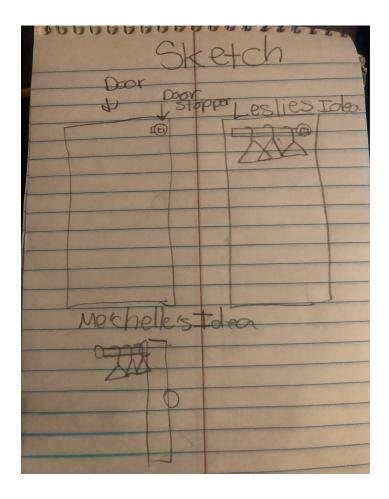

Explaining the Problem and Identifying a Solution (Identifying and Understanding)

<u>EX</u>	plaining the Problem and Identifying a Solution (Identifying and Understanding)
1.	What problem are you trying to solve? The more specific you are in describing the problem, the better your solution will be. How did you come up with the problem?
sto cas kid	any people have the problem with having holes on the wall from door knobs, either because they don't have a door opper or because their door stopper is not working properly. Some door stoppers leave marks on the door and some ses holes on the door. The spring door stoppers end up being a annoying kids toys and they end up breaking by a pulling and kicking them damaging the door stopper that could cause the door stoppers top to fall of and end up in by's mouth and/or the door stopper can fall off the wall, also can cause a injury.
	other problem is not having space to hang coats and bags and/or other clothing, it's especially a problem when ere are guests over. Installing hooks is time consuming , Some of them come with screws and damage the walls.
2.	What is the result you are trying to achieve? The more specific you are in describing the result you want, the better your solution will be.
	rving a product that doesn't allow the door to hit the wall and it is easy to install without damaging the wall or door th screws
3.	What are some possible solutions? Which one did you choose to pursue? How did you decide which solution to try? The more specific you are in describing the solution you will create, the better your invention will be. How did you come up with the solution?

4. Has this solution been done before? If it exists, how is your approach different and better? What research did you do to see if this invention had been done before? Who did you talk to? Where did you look? What website did you search? You should show 4 pieces of evidence of different types of research – talking with experts, searching the internet, interviewing friends and family as to how useful this would be, etc.

Where I looked to see if my idea is new:

A. Google search for "door hook hanger"

B. Google search for "door stopper & hanger"

There are some inventions com come with a door stopper and only one hook. Our invention would be different going more hooks to hang and goes over the door to not damage it.

Teacher Signature - REQUIRED FOR ALL PARTICIPANTS

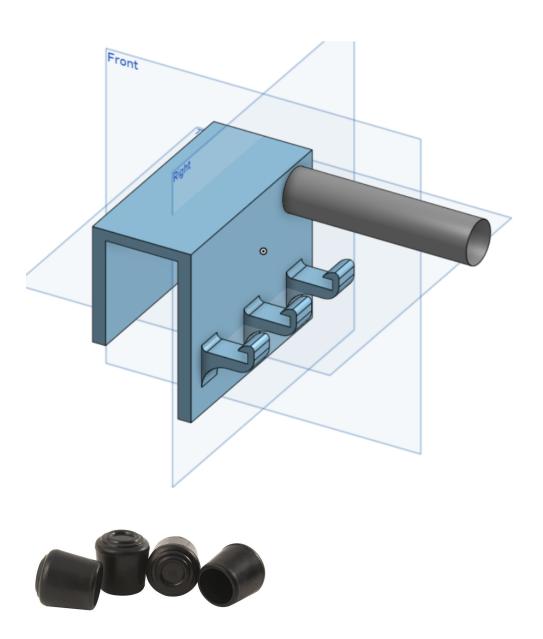

I approve of the solution/invention my student has chequidelines shown on the Restrictions and Requirement	,
Teacher's Name (Printed)	
Teacher's Signature	Date
I approve of the solution/invention my student has	chosen to pursue and agree that it not only meets the

Creating and Improving the Design (Ideating and Designing)

5. Draw a model (a sketch or drawing) of the invention you are thinking about building. Label all the important parts and features. Explain how the invention will work. If you need more space, use another blank page.

On this invention there are hooks where you can hang your things and there's a door stopper too, you can put this over your door and not add any screws to damage your door, and in the back you have a tightening screw that you don't screw in in the door. It's just to tighten the invention to the door without making a hole.

6. What problems or might you encounter with this design? Is this design compatible with the principle of sustainability? Who did you talk to about this design (another student, parent, teacher, etc.)? What were their comments about your design?

If there is an unreasonable amount of clothes or pressure on the door stop hanger it could possibly break. This design is compatible with principle of sustainability because we added in filliet to give more sustainability to both the prototype and and the prototype's hangers. We talked to our teacher and he thought that we needed a simpler design but a good one and that each design we make is better than the last one.

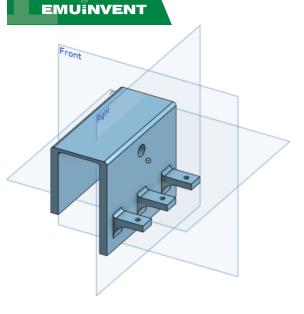

7. How can you fix those problems or address those issues?

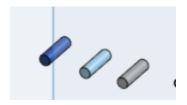

Test different materials and design versions.

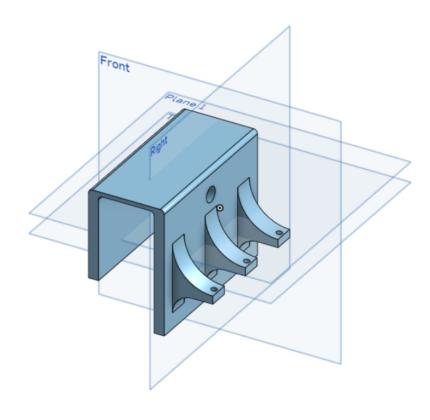

8. Repeat steps 5 to 7 until you have a design that you think will work. You may have to make multiple copies of a blank page until you have a good design.

3D

Building the Invention or Prototype (Designing, Building, Testing)
9. What parts, materials, and tools will you need to make the invention and how much will they cost? We need a 3D printer, rubber cap. Rubber cap is \$3.38.
10. Where will you get those parts and materials?
printer we got it from the teacher ,and the rubber cap we got it from Amazon
11. What additional skills or abilities will you need to make the invention?
Knowing how to use a 3D printer.
12. Who can help you build the invention?

	. Get the parts and materials and build the invention (with help). Done
14	. Test and evaluate the invention. What did you do to test the invention? Done. what we did to test this invention is that we put it over the door and see if the door closed and see if it stopped the door from hitting the wall.
the 3	. Identify any problems with the invention. What will you change to make it better? D printer couldn't print out the hangers we first design, so we will design a different hanger for the 3D printer to print it out.
16	. Repeat steps 5 to 15 until the invention works as planned. You may have to copy and make multiple copies of this blank page until you have an invention that works the way you want.

Naming the Invention (Communicating)

17. Naming your invention is important.• What words describe your invention?
Door stopper , Hanger,
Think in terms of words that will help you name your invention.
Stop, door ,hang , over.
What is the function of your invention? It stops the door from hitting the wall and not making a hole and at the same time you can hang things.
Think in terms of marketing it. How will it solve the problem? How will it help others?
Before the door knob hits the wall the door stopper is going to stop it, and when you need a place to hang your things you can hang them on the hanger instead of placing them on the floor it will be stepped on or on the couch you are not going to be able to sit down comfortably.

where

• How is your invention different from others that may already be on the market? If it is similar, what did you do to make it better? How is it different?

This invention is different from what is on the market because it is a combination of the hooks that hang on your door and a door stopper that you attach to this door. This is better than the product that has one hook on a door stopper because it has multiple hooks and doesn't damage the door with screws.

Who is your target audience? Who would use your invention?

People that rent can't damage the door walls or people that don't have the right tools.

	•	or cannot accoming to a minimum you can accoming		
		Alliteration (using the same first letters or sounds): "Kit Kat"		
		Rhyming: "Light Bright"		
		Alternative spelling: "Sno Bal"		
		Using numbers in the name: "Super Clean 3000"		
		Describing the function of the invention: "Hydro-Blast"		
•	Based on this analysis, what are some good names for your invention			
	Doorstop hanger .			
	5	orotop hangor .		

Some creative attention-getting techniques you can use are:

Which name do you like best and why?

We think that Doorstop hanger is the best because in the name you can tell what it is.

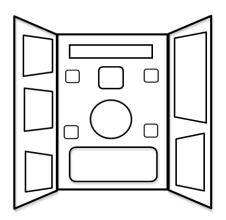

Planning and Creating the Invention Display Board (Communicating)

18. Create your display board. This is an example of what a Display Board might look like, but you can make it look however you want. This is your invention and your display, so use your creativity to tell the story of your invention the way you want.

Be sure you use:

- Fonts that are readable (style, size, color)
- Colors that look good together
- Shapes that are the right size
- Correct grammar and spelling
- Proper punctuation

Maximum size: With the wings folded in, the Display Board can only take 24" of table space. However, you are allowed to open up the wings during your Judging Circle presentation.

Your Display Board MUST contain the following information in one consolidated place on the poster:

- Student(s) Name(s)
- Project Name
- Student(s) Grade(s)
- Student(s) School
- School City, State
- Preferred Industry-Focused Award Category (e.g. Telecommunications)
- Patent Status (three options: None, Under Counsel, or Patent Pending)

Students should note "Patent Pending" on their posters for Patent Status **only** if a provisional or non-provisional patent application has been officially filed with the USPTO. If you are currently represented by an attorney or patent agent (pro bono or otherwise), then mark "Under Counsel." It is possible to be both "Under Counsel" and "Patent Pending", or just "Under Counsel", or just "Patent Pending" (if you did the filling yourself).

You might also want to add this information:

- · Images showing you building or testing
- How the invention was made
- How the invention is used
- The biography of the inventor
- Text which supports and explains any pictures, drawings, charts, etc.
- What scientific principles were used in your invention? (e.g. buoyancy, heat transfer)
- What engineering disciplines were used in your invention? (e.g. electronics, optics)
- Testimonials from users, research results
- Any other information about the invention that will help explain it, what it does, or why it is good

Practicing What You Will Say About Your Invention (Communicating)

19.	Be prepared to answer questions. Here are some questions that you might be asked in the Judging
	Circle by the judges or fellow students. To help you prepare, you might want to write down some of the
	important parts of your answers so that you have them when you practice giving your presentation.

What people, situations, or conditions does this problem affect?

• How did you think up your solution to the problem?

•	Where did you get the materials for the invention?
•	Who helped you build the invention and what did they help you do?
•	Are there other, better materials you could have used that would improve the invention?
•	Who has used your invention and what did they think about it?

•	What changes	might you	want to	make to	your inven	tion?
---	--------------	-----------	---------	---------	------------	-------

20. Be proud of what you have done. You will use the problem-solving and communication skills you have gained here throughout your life and career. Congratulations on what you've done!

Blank Page(s)

These blank pages are available for you to add anything to your Invention Log that will help explain what you did, how you did it, and what the results were. This could include drawings, calculations, descriptions, test results, etc. Multiple copies of this page can be inserted anywhere you want in the Invention Log.
